What is EatIt App?

EatIt is a food delivery app designed to make ordering meals quick and hassle-free. In today's busy lifestyle, users often struggle to decide what to eat and where to order from, leading to wasted time and frustration. EatIt brings multiple food options and restaurants onto one platform, helping users easily search, compare, and choose meals. With clear food details, ratings, and reviews, the app supports better decision-making.

Problem

In a fast-paced lifestyle, users struggle to decide what food to order due to too many options and lack of clear information. Comparing prices, quality, and ratings across platforms takes time. This often results in delayed decisions or repetitive, unhealthy food choices. The overall ordering process feels confusing and inefficient.

Solution

EatIt provides a single, user-friendly platform to explore food options easily. It displays clear details, ratings, and reviews to help users make informed choices. The app simplifies cart management and checkout, reducing effort and time. This creates a smooth, convenient, and satisfying food-ordering experience.

CA-1 Research:

Secondary Research

- Studied the evolution of food-ordering interfaces, from manual canteen systems to digital food delivery platforms like Zomato and Swiggy.
- Explored modern UI/UX principles consistency, minimalism, real-time feedback, intuitive navigation, and mobile adaptability for campus use.
- Analyzed successful app designs such as Zomato, Swiggy, and Blinkit to understand effective interface patterns, including live tracking, responsive layouts, and quick-access menus relevant to a student-centric canteen app.

Primary Research

- A. A survey was conducted among LPU students to understand their lunch habits and challenges faced in the campus canteen.

Result: - Most students reported time loss and dissatisfaction due to long queues and manual ordering.

- B. The questionnaire focused on key areas like menu visibility, waiting time, payment preferences, and food availability.

Result: - Over 70% of students wanted a real-time digital menu showing availability and prices.

- C. Students were asked about the usefulness of pre-ordering food through a mobile app.

Result: - A majority rated it as “very useful”, showing strong interest in digital convenience.

- D. Preferences for payment methods were also studied to ensure a smooth checkout experience.

Result: - UPI options like GPay and PhonePe were most preferred for quick transactions.

Overall findings revealed a clear demand for a smart canteen app with pre-order, live tracking, and quick payment enhancing efficiency and user satisfaction.

In-Person User Research

Online Survey Results Summary

What part of the canteen experience do you find most frustrating?

21 responses

Are you a day scholar or hosteller?

21 responses

What do you usually do when your favorite food item is unavailable in the canteen?

21 responses

How often do you wish the canteen had a live digital menu showing photos, prices, and availability of each item?

21 responses

How do you usually manage your lunch at the university?

CA-2 User Personas:

Priya Menon

Canteen Manager

Age 42 years
Gender Female
Location Bangalore, India
Profession Food Service Manager
Experience 18 Years
Department Operations & Logistics
Working Hours 6:00 AM - 4:00 PM
Team Size 25 Staff Members

"Efficiency in the kitchen means happy customers and a smooth operation - every minute counts during rush hours."

Pain Points

- Managing inventory across multiple vendors with manual tracking systems
- Peak hour chaos with 300+ orders causing kitchen bottlenecks
- Difficulty forecasting daily demand leading to food wastage
- Manual cash reconciliation at end of day takes 45+ minutes

Goals & Motivation

- Reduce food wastage by 30% through better demand prediction
- Streamline vendor management and automate purchase orders
- Implement digital payment tracking to save reconciliation time
- Monitor real-time kitchen capacity and order queue status

Behavior & Habits

- Starts day reviewing previous day's sales and inventory reports
- Uses WhatsApp groups to coordinate with 8 different suppliers
- Prefers tablet devices for mobility around the canteen floor
- Checks stock levels manually 3-4 times during service hours

Technologies Used

- Excel spreadsheets for inventory tracking and daily reports
- WhatsApp for vendor communication and order coordination
- Basic POS system for order taking and payment processing
- Paper notebooks for manual stock counts and supplier tracking

Arjun Sharma
University Student

About

Age 21 years

Gender Male

Location Punjab, India

Year 3rd Year

Department Computer Science

Tech Level Software Engineer

Daily Budget ₹150-200

Food Style North Indian

Favorite Apps Swiggy, GPay

"I don't want to spend my entire break standing in queues-I just want to grab my food and go."

Pain Points

- Loses 20-30 minutes in long queues during peak hours
- No visibility of menu until reaching the counter
- Frustration from slow ordering and payment delays
- Tight schedule between classes makes dining stressful

Behavior & Habits

- Visits canteen 2-3 times daily during short breaks
- Heavily relies on smartphone for daily tasks
- Prefers UPI payments over cash transactions
- Expects minimal UI with fast interaction speeds

Goals & Motivation

- Save time by pre-ordering food before breaks
- View real-time menu and pricing from anywhere
- Make quick UPI payments (GPay/PhonePe) digitally
- Track order status and pickup time accurately

Scenario

Arjun has just a 20-minute lunch break, but long canteen queues and no visible menu waste most of his time. He often skips meals or settles for anything quick. He needs an app to browse the menu, pre-order, pay via UPI, and pick up his meal instantly so he can enjoy his favorite North Indian dishes without stress and make the most of his short break. A quick, convenient lunchtime solution.

CA-3

Empathy Mapping

Says

The queue is too long, I'll be late for my next class

Sometimes food gets over by the time I reach the counter

"I don't even know what food is available today.

Think

I should skip lunch or order something quick.

There must be a smarter way to manage food ordering.

I hope my order doesn't get delayed

Sometimes avoids the canteen due to time constraints.

Asks others about food availability

Stands in long queues during peak lunch hours.

Do

Hungry and impatient during rush hours.

Happy when food ordering is smooth and fast.

Anxious about missing classes.

Feels

Empathy Mapping

Says

The queue is too long, I'll be late for my next class

I wish I could see food availability before ordering.

"I don't even know what food is available today.

Think

If I could pre-order food, I wouldn't waste time.

There must be a smarter way to manage food ordering.

I hope my order doesn't get delayed

Sometimes avoids the canteen due to time constraints.

Checks phone repeatedly to decide where to eat.

Stands in long queues during peak lunch hours.

Frustrated when food ordering takes too long.

Happy when food ordering is smooth and fast.

Anxious about missing classes.
